

HOW TO BUILD *your* ALL-WEATHER MILK HUT*

*For your milk, eggs, bread or last night's kebab (if you got in late).

We tested our idiot-proof guide on a few guinea pigs in the office. Of course, they're no master carpenters, but "they've built a few Billy Bookcases in their time", and this was a breeze compared.

First, check your parts

The Milk Hut comes in 6 parts:

You've got this!

STEP 1

Take the **Back Panel** and a **Side Panel** and slot the hooked pegs into the holes. The hooks should be facing up, and the Side Panel should be sloping down from the back panel.

STEP 2

Attach the **Front Panel** to the attached Side Panel using the hooked pegs and holes, with the logo facing outwards and the hooked pegs facing upwards.

STEP 3

Before you attach the other Side Panel, slide the **Bottom Panel** in between the Back and Front Panels (with the pegs facing front and back), and slot the pegs into the holes.

STEP 4

Put the hut on its side and attach the other **Side Panel**, with the side sloping down from the Back Panel (as per the other side). Don't push the Side Panel in fully, as you'll need some wiggle room to attach the Lid.

STEP 5

Turn the hut back onto its base, then attach the **Lid** by placing the pegs into the hinge holes, ensuring the back of the Lid is behind the back of the hut (to prevent it from getting stuck).

Top tip: Do not push the pegs in tight until the entire hut is built. You will need the wiggle room to slot all of the pieces together first. If you're building the milk hut as a couple, this advice could save your marriage.

Sustainably cool

We hope this wooden all-weather milk hut will provide a sustainable way to keep your groceries cool, dry and protected. You can keep your all-weather milk hut cool with old cool blocks, ice packs or a metal water bottle that's been half-filled and frozen, for example. And remember to change the delivery instructions in your online account to let your milkie know you're using an all-weather milk hut (Cool Box/Container) – not to be confused with the Smeg fridge on the front drive that's awaiting council collection.
